

NetCentrics is Your Trusted Partner for IPv6 Migration

The mandated transition to IPv6 only, set by OMB memo M-21-07, establishes objectives with stretch goals, specifically for those agencies that are having challenges in finding IPv6 experienced partners to assist in their accomplishment. NetCentrics has your premier dedicated IPv6 Transition team, led by the former Internal Revenue Service IPv6 Transition Manager, Ralph Wallace. Our experience has been sharpened during the past year supporting the VA with their IPv6 Transition, including but not limited to establishing application IPv6 test beds within the VA Cloud environments. Let's discuss best practices.

Understanding Mandates and Your Future End State

Federal IPv6 Task Force IPv6 Transition published Best Practices (And M-21-07 Implementation plans) call for the following elements (and feedback from agencies indicate these are all essential to meet IPv6 needs):

- Network Infrastructure/IPv6 Addressing Plan/DNS architecture
- Cybersecurity Defense in Depth architecture (changes to reflect IPv6)
- Platforms (Workstation, Server, Cloud, Datacenters) and peripherals (phones, printers, IoT)
- Applications (required to remove hard coded IPv4 addresses in order to use IPv6)
- People and Process (Training and testing)

The Experts You Need, Today

NetCentrics excels in facilitating seamless IPv6 migration across various scales, showcasing exceptional expertise and capability. From establishing Project Management Offices (PMO) to integrating network components, we ensure a comprehensive approach. Our support extends to conducting data discovery and gap analysis, to enabling the network, cybersecurity components, platforms and applications, to deploying specialized training and testing teams, guaranteeing success at every project phase for organizations like yours.

Ralph Wallace, Principal Subject
Matter Expert, IPv6

A huge technology insertion effort such as an IPv6 migration requires an equally huge risk management process. A process that encompasses every element of the people, process and technology used to achieve this daunting task. Experience dictates to follow proven risk reduction approaches, and the use of "best practices" wherever possible. With over 15 years of dedicated IPv6 migration experience with US Government agencies both civilian and DoD, we have built our risk database with successful mitigation strategies, all based on facts and successful benchmarks. We are your risk mitigator."
